+ -	polyurethane	heat	2	In addition , polyurethane transmits heat once it is inside the body , so you can hardly feel it during sex .
+ -	carbon dioxide	heat	1	Carbon dioxide absorbs heat from sunlight and warms up the Earth .
+ -	helium	heat	1	And helium conducts heat more readily than nitrogen -- so that breathing helium robs the body of heat about six times faster than regular
+ -	salt water	electricity	1	The idea here is that salt water conducts electricity , and the conductivity can
